

Claim 42. (Not Amended) – The method of claim 36 further comprising optically recognizing the scanned data and converting the scanned data into character codes.

Claim 44 – (Not Amended) The method of claim 43 including using serial data transmissions between the facsimile machine and the personal computer.

Claim 45 – (Not Amended) The method of claim 43 including using parallel data transmissions between the facsimile machine and the personal computer.

Claim 46 (Not Amended) - The method of claim 43 including using analog data transmissions between the facsimile machine and the personal computer.

Claim 47 (Not Amended) - The method of claim 43 using analog data transmissions, or digital serial, or parallel signals, between the facsimile machine and the personal computer.

Claim 48 (Not Amended) - The method of claim 43 further comprising optically recognizing the scanned data and converting the scanned data into character codes.

Please amend claims: 27-29, 32-36, 40,41, 43, 52-54, as follows:

~~Claim 27. (Amendment 3) - A method of creating a scanning capability from a facsimile machine to a computer; with scanned image digital data signals transferred without interception from the facsimile machine to the computer, comprising the steps of:~~

~~by - passing or isolating the facsimile machine and the computer from the public network telephone line and;~~

~~coupling the facsimile machine to the computer;~~

~~conditioning the computer to receive digital facsimile signals representing data on a scanned document;~~

~~conditioning the facsimile machine to transmit digital signals representing data on a scanned document to the computer, said computer being equipped with send / receive~~

I' conel
H' conel

driver communications software enabling the reception of scanned image signals from the facsimile machine, said transmitted digital facsimile signals being received directly into the computer interface without prior circuit interception, thereafter, said computer processing the received digital facsimile signals of the scanned document as needed.

Claim 28. (Amendment 3) - The method of performing a scanning function to a pre-existing facsimile modem, connected to a facsimile machine, said facsimile modem being internal or external to a computer, in order to enable a scanning function, said facsimile machine and fax modem are connected when transferring scanned signal data, without interception of said signals between the facsimile machine and the fax modem, said facsimile machine and fax modem being isolated from the public network telephone line, and by which the establishment of the transmission state within these types of connections include one of:

- a) External initiation including ringing, constant current, on / off hook, or any typical telephone or digital signaling protocols.
- b) Internal initiation, including setting a manual receive mode, setting a specialized mode, including, "computer mode" or by pressing a start button on the facsimile machine; or combination of a and b.

29, (Amendment 3) - The method of claim 27 to create a scanning function from a facsimile machine to a computer by transfer of non-intercepted signals from a facsimile machine, through a connection containing data, representative of scanned images, said facsimile machine, by-passing or isolated from a public network telephone line, and connected to an appropriate receiving port of a computer, or other office product capable of receiving and processing said signals.

Claim 32. Amendment 2. - The method of claim 27, including transferring a parallel data source signal of a scanned image from said facsimile machine to said computer.

Claim 33. Amendment 2. - The method of claim 27, including transferring a serial data source signal of a scanned image from said facsimile machine to said computer.

Claim 35. Amendment 2 - The method of claim 53 for creating a printing function from a computer to a facsimile machine by sending non- intercepted, data signals, representative of a document to be printed from a computer, and connected to an appropriate receiving port of a facsimile machine, said facsimile machine and computer by - passing or isolated from one or more public network telephone lines.

Claim 36. Amendment 3 - A method of making a facsimile machine operable as a scanner or printer for a personal computer, each of the facsimile machine and personal computer for communicating normally using at least one public network telephone line, comprising the steps of:
configuring the facsimile machine to communicate with the personal computer using a digital connector port of the facsimile machine, and personal computer, with both the facsimile machine and personal computer isolated from said at least one public network telephone line:
arranging the facsimile machine to be in a digital connection mode,: and
shifting the personal computer to a connection mode, for sending or receiving non intercepted digital signals for scanning or printing between the computer and the facsimile machine, in a facsimile machine format, using a digital connector port of the personal computer, said computer being equipped with send / receive driver communications software enabling the transfer of said scanning or printing signals between the computer and the facsimile machine.

H5 SUBI6

Claim 40. (Amendment 2) - The method of claim 36, using, RS 232, parallel or other suitable digital port type connectors to interface between said facsimile machine and said computer.

H6 SUBI7

Claim 41. (Amendment 2) - The method of claim 27 further comprising optically recognizing the scanned data and converting the scanned data into character codes.

H7 SUBI8

Claim 43. (Amendment 2) - A method of using a facsimile machine as a scanner or printer for a personal computer, each of the facsimile machine and personal computer for communicating using telephone types of circuits, said facsimile machine and computer being isolated from the public telephone network, comprising the steps of:

- (a) Configuring the facsimile machine to communicate with the personal computer using the facsimile machine, and by - passing or isolating the facsimile machine and computer from the public telephone network,
- (b) arranging the facsimile machine to be in a simulated off-hook condition, or connection mode; and
- (c) shifting the personal computer to an off-hook condition, or connection mode for sending or receiving non - intercepted signals in facsimile formats between the personal computer and the facsimile machine,
- (d) said computer being equipped with send / receive driver communications software enabling the transfer of said scanning or printing signals between the computer and the facsimile machine.

Claim 52 (amended) - A method of using a facsimile machine with a computer, one or both of which being connected to a telephone line, such that said facsimile machine, operates as a scanning device, when isolated from the telephone line, comprising the steps of:

- (a) coupling the facsimile machine to the computer;
generating a facsimile machine signal, whereby the computer is conditioned to receive signals representing data on a scanned document.

generating a signal to simulate an off - hook condition, or connection mode, providing a direct path, whereby the facsimile machine is conditioned to transmit, signals without interception to the computer, representing data on a scanned document.

Claim 53. (amended) A method of using a facsimile machine with a computer, one or both of which being connected to a telephone line, such that said facsimile machine, operates as a printing device, when isolated from the telephone

line, comprising the steps of:

(a) coupling the facsimile machine to the computer;

(b) generating a signal representative of a standard facsimile machine call signal,

whereby the computer is conditioned to transmit signals representing data on a document to be printed.

(c) generating a signal to simulate an off - hook condition or connection mode, providing a direct path, whereby the facsimile machine is conditioned to receive non intercepted signals representing data from the computer of a document to be printed.

Claim 54. - Amendment 2. A method of making a facsimile machine operable as a scanner or printer for a computer, each of the facsimile machine, and computer for communicating, normally using at least one public network telephone line, comprising the steps of:

configuring the facsimile machine to communicate with the personal computer using a digital connector port on the facsimile machine, and a digital connector

port on the computer, with both the facsimile machine and computer by - passing or isolated from said at least one public network telephone line: and

arranging the facsimile machine to send or receive digital data signals, and

coupling the digital data signals to the personal computer, and the facsimile machine, said computer equipped with send / receive driver communications software enabling
